8021 - HIGH SCHOOL DISCUS CAGE WITH REAR ENTRY SYSTEM SPECIFICATIONS

The 8021 High School Discus Cage with Rear Entry System, consists of seven, 14' tall, rolled aluminum net poles with ground sleeves, a vinyl coated net support cable to reduce net sag, and a weather treated nylon net. Hinged net arms, at ground level, hold the net in place at the front of the cage. The poles are 2 7/8" OD, 0.203 wall, 6063-T6 aluminum tube. Each pole stands in a 30" deep ground sleeve. The net is 180 lb. test nylon which has been weather treated for extended service life. The net has a special cut out and extra section in the back to allow for easier access to the throwing circle.

8021 - HIGH SCHOOL DISCUS CAGE WITH REAR ENTRY SYSTEM GROUND SLEEVE INSTALLATION

1. Stake out and mark with string the sector center line crossing the circle center. Stake out a second line perpendicular to the sector center line at the circle center. Measure and mark the sleeve centers for each post as shown below.
2. Dig seven 34" deep holes at marked locations. The minimum recommended diameter of these holes is 18". Soil conditions at your sight may require larger diameter concrete bases for each pole.
3. Place approximately 4" of rock in the bottom of each hole. The rock should support the sleeve at the proper height and allow water in the sleeve to drain away.

4. Mark the hole centers with crossed strings. Set each ground sleeve in place so the top edge is 1/2" above the surrounding ground level. Position the sleeves so the poles will face in the directions indicated by the arrows as shown. Note the detail showing the orientation of the sleeve pin to the pole axis arrow. As the sleeves must remain vertical, secure them in place with wire and short sections of rebar.

5. Carefully pour cement around the ground sleeves. Check with a level to ensure sleeves have remained vertical. The concrete should slope away from the top edges of the sleeves to ground level to help keep water and debris out of the sleeves.

6. At the rear pole positions, dig 6" diameter holes 13" deep. These holes need to be positioned as shown below. Pour concrete up to 1" below ground level.

7. After the concrete has hardened, install anchor and eyebolt.

Left and right side dimensions mirror each other.

Note A: Pour an additional eyebolt pier to secure the bottom corner of the door flap.

NOTICE: All installations should be conducted by experienced contractors and in accord with all applicable codes, laws and regulations. Suggested instructions herein are illustrative only and should be adapted to suit local requirements. Gill Athletics is not responsible for the manner in which these products are installed.

DISCUS CAGE DROP IN CONCRETE ANCHOR INSTRUCTIONS

Drill a $\frac{1}{2}$ " diameter hole, $1\frac{1}{2}$ "
deep in the center of the pier.
Clean out hole with a vacuum.

With the threaded opening pointing
up, insert the anchor into the hole.
Tap it down with a hammer.

Use the installation tool and a
hammer to set anchor.

Thread the eyebolt into the anchor.

802020 - CAGE NET POLES NET POLE ASSEMBLY

1. Install pulley assembly at the top of the net pole with 1/4" nylock hex nuts. The gap in the eye of the bolt should face up. Install the black pole cap. The thread on these eye bolts can be trimmed after installation, if so desired.
2. Install the eyebolt at the lower hole with nylock nut. The thread on these eye bolts can be trimmed after installation, if so desired.
3. Install the rope cleat with 1/4" hardware.
4. Cut each 50' rope (M2005) in half and melt ends to prevent fraying. Tie one end to snap hook and feed the other through the pulley and lower eyebolt. Tie the loose end to the rope cleat to prevent the rope from being lost when lowering the net.
5. Insert the net pole into the ground sleeve so that the curve of the pole is towards the inside of the cage.
6. Install net flip arms (73210043) on the front poles with u-bolt (M2298), washers (M2263), and 1/2"-13 nuts (M2233). After the net is raised, clip the bottom rope edge of the net to the end of the net flip arm.
7. Attach snap hooks (M2223) to the anchored eyebolts at the rear poles. After the net is raised, clip the bottom of the rope edge of the net to the eyebolts.

8021 - HIGH SCHOOL DISCUS CAGE WITH REAR ENTRY SYSTEM NET INSTALLATION

1. To minimize sag, the net is supported by a vinyl coated steel cable. To install the cable, weave it in and out through every 5th net opening just below the top edge of the net. When finished, the loops at each end of the cable should be even with the ends of the net.
2. To ensure the net is evenly spaced when it is installed, mark each hook position on the net according to the diagram below. Stretch the net out flat and stake one upper corner to the ground along with the end of a 100 ft. long measuring tape. Stretch the net and tape to 68' 6" and stake the corner to hold it's position next to the tape. Mark the top of net and the cable at the dimensions shown.

4. Lay out the net inside the cage poles with each marked position next to the appropriate net rope hook. At each position hook both the net binding and the cable. At each end be sure the hook is through the cable loop.
5. Raise the net to the top of the poles and tie off the ropes. At the base of the front poles, hook the bottom corner of the net to the flip arm. A sand bag or other weight can be placed on the arm to increase the arms resistance. If you desire, additional net flip arms can be purchased. At the rear poles, clip the net to the anchored eyebolts. The bottom 6" of the net is supposed to lay on the ground to help trap a discus.

8021 - HIGH SCHOOL DISCUS CAGE WITH REAR ENTRY SYSTEM NET INSTALLATION

NOTES:

1. Measure up from the ground 11ft and drill $\text{Ø}\frac{9}{32}$ " holes through both poles. Install 4" long eyebolts (M2749) with $\frac{1}{4}$ "-20 nylock hex nuts (M1290). Wrap the rear access net extension around the outside of the two net poles. Hook the net to the poles at the eyebolt 11ft from the ground using snap hooks (M2223).
2. Lace the entire end of the net extension to this pole using rope.
3. Clip the bottom corner of the net to the anchored eyebolt to keep the net from moving in the wind.

THROWING CAGE INSTALLATION OF WARNING SIGNS

For the protection of athletes, spectators, and coaches install warning signs according to the diagram below.

Attach signs (M2322) to the cage net with the included 1.25" rings (M1250) in each corner. Signs should face away from the cage toward spectators.

Center Back: Attach sign to the outside of the net at eye level in the middle of the back of the cage.

Left Front Side: Attach sign to the outside of the net at eye level near the front left side of the cage.

Right Front Side: Attach sign to the outside of the net at eye level near the front right side of the cage.

BACK DOOR DISCUS CAGE BARRIER NET NET INSTALLATION

Discus cage size and layout will vary depending on model number.

The barrier net wraps around the outside of the cage poles and is 8 feet tall.

The barrier net improves safety by keeping spectators from standing up against the outside of the main net.

However it does not eliminate the possibility of injury, everyone involved with the discus throw from spectators to athletes must show proper judgment.

NOTE:

1. The discus cage barrier net is consists of two net sections, a net support cable, and connecting hardware.
2. If not already installed, install eyebolts in all of the net poles and door poles at 8 feet above the ground. The eye of the eyebolt should be on the outside of the discus cage.
3. Starting at the door poles, hang the barrier net from the eyebolts using snap hooks.
4. At the end of the short section, lace the net support cable through the top of the barrier net. Connect the net support cable to both poles. Do not connect the end of the short net section to the net pole, this will leave an opening to the rear access of the discus cage. See top left drawing.
